

# More Than Just Enterprise Resource Planning

## TraceNet - enterprise resource planning and traceability in one single system

TraceNet is an enterprise resource planning (ERP) system which optimises and supports all manufacturing, transaction, processing and communication systems within your organisation.

It simplifies planning, organisation, supervision and controlling of the steady flow of goods from and to the customer.

TraceNet covers - among others - the following fields of enterprise resource planning:

- acquisition
- storage
- sorting and packaging
- sales
- creation of inventory
- quality management
- billing
- controlling and monitoring

## TraceNet - a solution tailored to the food sector

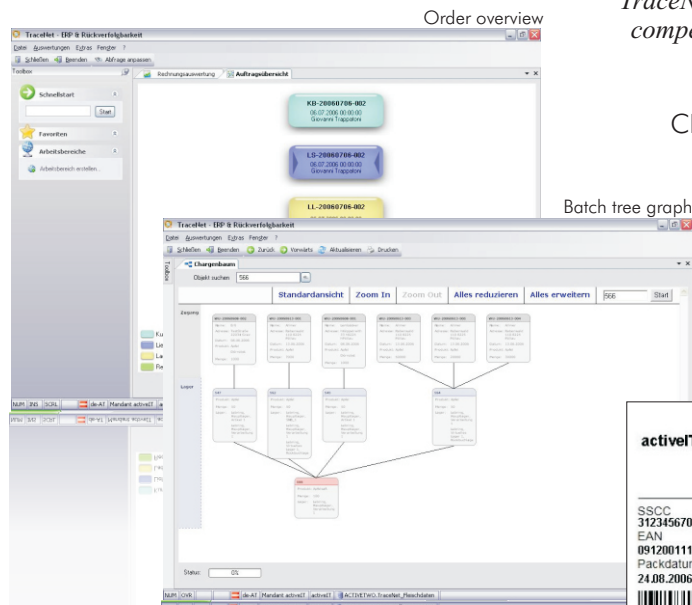

TraceNet was designed especially for the food sector and suits very well for producers and producer organisations, traders and marketers of almost any type of food.

## Your advantages at a glance

- one single system for tracking and tracing and enterprise resource planning
- reduces your potential labour costs
- complies with quality and traceability requirements as per EU regulation 178/2002, as well as IFS, BRC and EUREPGAP
- approved by renowned food experts
- minimises manual data input
- provides flexible interfaces to other systems
- guarantees long-term use due to modern technology
- universally suitable for a multi-lingual use
- the option of a graphic presentation of all transactions at the push of a button
- comprehensive documentation of all movements of goods and their quality
- integration of subsidiaries and additional warehouses (after the input, all data is immediately available, even at the home office)
- fits your enterprise and not the other way round!

*"Our quick growth wouldn't have been possible without the use of TraceNet and the support of the competent team of activeIT!"*

Manfred Hohensinner
